Partners

WHIH Partners is the first initiative launched as part of the Warsaw Health Innovation Hub (WHIH) - a project of the Medical Research Agency, implementing key projects to increase sustainability, efficiency and resilience of the Polish health system, and to strengthen the development of the biotechnology and pharmaceutical sectors.

WHIH Partners is the first initiative on the Polish market, complementarily using the potential of the business and public sector in the process of identifying problems of the health system, and as a result supporting the diagnosis and treatment of patients. Models of cooperation between representatives of business, the public sector and science established and developed in the WHIH will provide a basis for the development and presentation of proposals for legislative and sectoral changes serving the development of the biotechnology and pharmaceutical sector in Poland.
